From knowledge to technology

MS-120 Topcoat

For more than 25 years, growers have used the Meteor Systems growing gutters, which feature a high-quality top coating. Due to the increasing disease pressure from viruses and fungi in greenhouse horticulture, intensive and thorough cleaning during the crop change has become essential. With the changing legislation and regulations, an increased use of aggressive cleaning agents and the minimum environmental impact requirements, Meteor Systems and its suppliers have developed a new top coating for growing gutters.

After extensive research and practical testing, Meteor Systems supplies gutters with the new MS-120 top coating as well as growing gutters with an MS-35 coating. The MS-120 protective coating is developed based on the latest knowledge of corrosion resistance. It stops deterioration from cleaning chemicals used in horticulture and is scratch resistant. All our coatings are food safe and manufactured under the strictest standards. With the MS-120 top coating, producers are assured of a durable, easy-to-clean growing system with a very extensive guarantee for many years.

Important: Following our specific cleaning instructions is also required for this new coating.

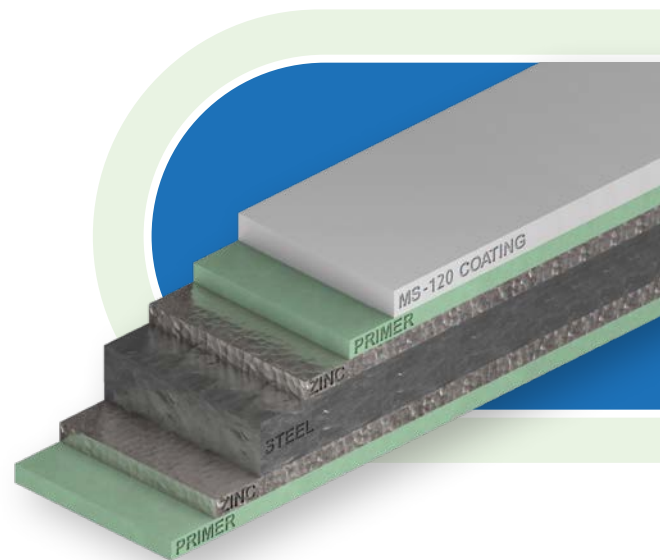

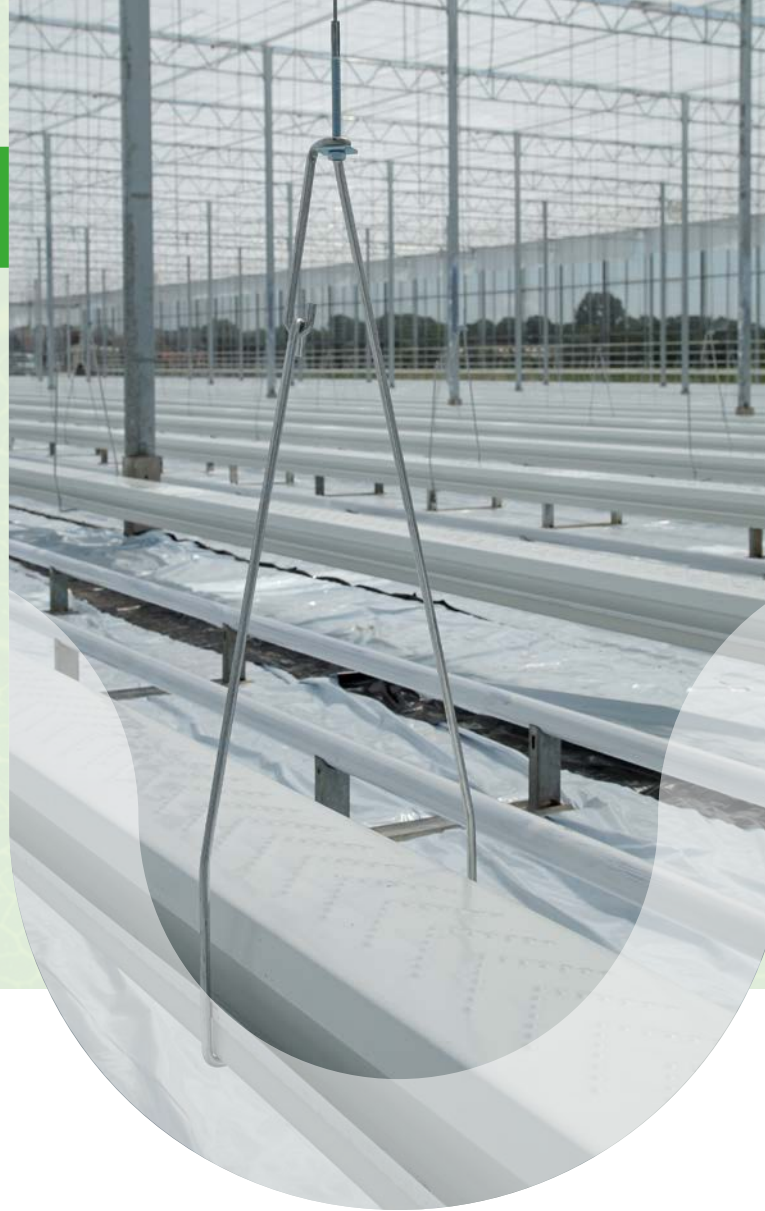

Resistant to
corrosion

Sustainable

Extensive
guarantee
